

The centre is home to some of the most advanced cancer research facilities in Europe, and was jointly funded by the Government, Christie Hospital, and Manchester University.

Wolfson Molecular Imaging Centre

Godfrey Syrett were delighted to work on the inspiring Wolfson Molecular Imaging Centre in Manchester.

The centre is home to some of the most advanced cancer research facilities in Europe, and was jointly funded by the Government, Christie Hospital, and Manchester University.

The three-storey building was primarily furnished

with three styles of MK2 workstations, with arc desk attached screens and Ergo 3 operator chairs. The breakout areas featured Carnaby, Madrid and Alto easy chairs with Ravenna tables, whilst Imbrex seating was used to create a warm welcome in the reception area.

Venicia multi-purpose seating was used to create a comfortable learning environment for seminar areas, with Credenza units

providing much needed storage space. In addition, Godfrey Syrett were asked to design and manufacture a bespoke kitchen and breakfast bar for our client.

From receipt of the order, our team took under a month to manufacture, deliver and install the required furniture. This standard of service has resulted in the WMIC specifying us again for various additional items.
